

Profile Updation Solution

Title: Shram Fresh Engine – Making eShram Profiles Dynamic eShram has brought 31.8 crore informal workers into the welfare net – but most profiles go stale within months due to incorrect phone numbers, outdated addresses, wrong employment categories, and missing skills. This silently hampers job search (under NCS), impairs scheme implementation and weakens policy analysis. Current update channels (portal, app, CSC) are stick-based; workers have to remember to login and update - this model misses out on the vast low-literate, migrant and feature-phone workforce eShram's absence leads to suboptimal employment and scheme outcomes.

Shram Fresh Engine will address this with a closed-loop multi-channel engagement system that inspires effortless updating.

Core Innovation

We develop a Freshness Score (0-100) indicator, which captures the freshness of key data elements (phone, current location, job category, skills) in terms of completeness and recency. Score decays over time, is displayed to the worker in eShram/NCS/WhatsApp. High scores translate into scheme and NCS benefits:

- Higher rank in NCS jobs ranking (leveraging Profile Completeness logic)

• Faster, easier scheme approval

- Digital badge to show readiness to work Why unique and feasible

Informational WhatsApp bots and update portals are common, but no national program today connects profile freshness to real economic benefits (job rank and scheme priority) through predictive multi-channel prompts. Shram Fresh Engine will utilise the government's existing public-private digital stack - eShram API, NCS ranking engine, Bhashini, CSC network, WhatsApp Business API to enable Phase-1 go-live within months. Pilot in 2-3 high-migration states would demonstrate impact on:

•Monthly profile freshness rate

•Level of scheme payment success

- Placement in NCS for high-freshness workers Impact

Cleaner data for 30+ crore workers, stronger trust in eShram/NCS, better welfare targeting, more efficient delivery of schemes – with a powerful mobile-first approach that turns a one-time onboarding into a constant cleaning. Profile never gets stale, benefits flow every day.

Problem Statement 02:
Profile Update

ShramFresh Engine

AI-Powered Profile Freshness System for 31+ Crore eShram Workers

PROBLEM

Stale Profiles Kill Impact

Outdated mobile, address & occupation

Workers forget to update

Low literacy & feature phone users left out

Weak job matching on NCS

Delayed scheme benefits

SOLUTION

Voice Input
(Regional Language)

Completeness
Check

Freshness Score

Profile Completeness

AI COMPONENTS:

Predictive Nudge Engine
(migration & seasonal signals)

Voice AI (Bhashini speech-to-text in 22 languages)

Smart Auto-Suggest from
DigiLocker + Aggregators

Freshness Score Algorithm
(completeness + recency decay)

KEY INNOVATION:

Closed-loop Incentive System
