

NCS Job Simulation & Interview Readiness Engine

Problem

Most interview-preparation tools focus on generic questions and feedback. A candidate may perform well in a mock interview but still lack the practical skills, job knowledge, communication or confidence required for the actual role. Jobseekers need a way to practice **the job itself**, not just the interview.

Our Solution

We propose an **AI-powered, mobile-friendly Job Simulation & Interview Readiness Engine** integrated with the NCS ecosystem.

The system uses an NCS job vacancy to create a **job-specific preparation experience** based on its skills, responsibilities and qualifications.

How It Works

1. Select a Job

Candidate chooses an NCS vacancy.

2. Generate Assessment

The system converts job requirements into practical tasks, workplace situations and interview questions.

3. Practice

- **Job Simulation:** Perform small tasks related to the actual role.
- **Workplace Scenarios:** Respond to realistic situations such as customer handling, problem-solving and prioritisation.
- **AI Voice Interview:** Complete a role-specific interview with adaptive follow-up questions.

4. Evaluate

Objective tasks are evaluated using predefined rules, while AI evaluates structured responses using defined rubrics for communication, behaviour, problem-solving and job knowledge.

5. Readiness Report

The candidate receives a clear report showing strengths, specific skill gaps and recommended practice areas.

Example: Junior Software Developer

Job requirements: Java, APIs, SQL, Git

Assessment:

Debug a program → identify an API error → solve an SQL scenario → explain a resume project → handle a workplace situation → complete a voice interview.

The system identifies exactly where the candidate needs improvement and recommends targeted practice.

Accessibility

- Mobile and low-bandwidth friendly
- Voice input and text-to-speech
- Regional-language support
- Captions and accessibility-friendly interface

Innovation

Instead of asking only:

“Can you answer the interview?”

we ask:

“Can you demonstrate the skills required for this job?”

The solution complements existing NCS employment and interview services rather than replacing them.

Impact

Job → Simulation → Assessment → Skill Gaps → Practice → Re-assessment → Interview Readiness

This can help candidates prepare more effectively, understand their weaknesses before interviews and build practical confidence.

Practice the Job. Prepare for the Interview.

NCS Job Simulation & Interview Readiness Engine

Practice the Job. Prepare for the Interview.

Real Skills.
Better Opportunities.

A job-specific, AI-powered preparation tool that goes beyond generic interview questions — helping candidates build real job skills, improve their confidence and become truly interview-ready.

The Problem

Most interview preparation platforms only ask questions and give feedback. They don't show whether a candidate **can actually perform the job**.

- Generic questions, not job-specific tasks
- No practical skill assessment
- Weak connection between resume and real job requirements
- Lack of guidance on exact areas to improve

Result: Candidates may "practice" well but still struggle in real interviews and on the job.

Our Solution

We use the NCS job vacancy to create a realistic, job-specific assessment with 3 simple stages:

- Job Simulation**
Perform practical tasks related to the actual job (e.g., coding, data entry, case analysis, etc.).
- Workplace Situations**
Respond to real-life scenarios you may face at work (e.g., customer handling, problem solving, prioritisation).
- AI Interview**
Voice-based interview with job-specific and behavioural questions. Follow-up questions based on your responses.

How It Works

Example: Junior Software Developer

Job Requirements (from NCS)	Assessment Includes	Sample Readiness Report
- Java / Spring Boot - APIs & REST - SQL - Git - Problem Solving - Communication	- Debug a small program - Identify an API error - Solve an SQL scenario - Explain a project from resume - Handle a workplace situation - Voice interview	68% Overall Readiness Technical: 78% Communication: 64% Problem Solving: 72% Behavioural: 58% Resume Defence: 65% Recommended Practice Focus on SQL, project explanation and communication.

Accessibility for All

- Mobile-friendly (works on low bandwidth)
- Voice input & text-to-speech
- Regional language support (Hindi, Marathi, etc.)
- Captions & screen reader friendly
- Simple and easy-to-use interface

Impact

- More Confident Candidates**
Know what to improve, step by step.
- Better Job Matches**
Prepared candidates perform better.
- Higher Employment**
Fewer dropouts, more success.
- Stronger Workforce**
Skilled, capable and job-ready India.

Practice the Job.
Prepare for the Interview.

Skilled Youth
Stronger India
